SHARING A COMMON AMBITION

The EXAKT power meter is the result of a close collaboration between two leaders: LOOK and SRM.

SRM developed in 1986 the first power meter, then democratized this technology by equipping the greatest champions and cyclists in search of true training precision.

LOOK invented in 1984 the first automatic pedal, revolutionizing the world of cycling. Continuing to evolve this technology in recent decades, LOOK pedals are a model of innovation and performance.

Imagine a totally integrated power meter, extremely accurate, reliable and ultra light!

The EXAKT power meter changes the rules and redefines the limits to enter in a world of precision, control and constant progression.
POWERFUL - LIGHT - RELIABLE

The carbon pedal body ensures an incomparable lightness and stiffness. The contact surface is made with stainless steel material for optimum stability and power transfer.

The spindle, result of the most advanced development, receives all electronic components. It is assembled with an oversized ball bearing and a needle bearing to ensure a better load distribution.
CORRECT MEASUREMENT IN THE CORRECT POSITION

The new EXAKT power meter uses the latest technical innovations we have developed.

Built with SRM’s experienced handcrafted precision, the EXAKT power meter pedal measures and transmits accurate and consistent power data for the performance driven cyclist.

Accurate, lighter, efficient: simply EXAKT.
NEEDLE BEARING, BALL BEARING, ELECTRONIC COMPONENTS EMBEDDED IN A SHRINK TUBE, INTERNAL SEAL, EXTERNAL SEAL, END CAP, SEAL SYSTEM, BEARING SYSTEM.
The pedal waterproofness has been the focus of attention thanks to the integration of new components - double seals system on the inside and end cap on the external - which guarantee the watertightness of the axle line.

Answering IPX6 / IPX7 standard, the EXAKT will allow you to face the worst weather conditions.

**IPX6** Powerful water jets / 1 minute per square meter for at least 3 minutes Water volume: 100 litres per minute Pressure: 100 kPa at distance of 3 m.

**IPX7** Immersion, up to 1 m depth Test duration: 30 minutes.
PROGRESS AND PASSION

The greatest victories are the fruit of modest details, slight but steady progress.

The EXAKT allows you to measure every detail of your performance, to improve your training habits to help you discover your limits and progress constantly.

Equipped with dual Bluetooth L.E. and ANT+ compatibility, the EXAKT gives you the choice to record, analyze and share your data.
POWER

Independent of environmental factors, measuring the power output allows to manage your training effectively, to define your training zone and to follow precisely the evolution of your performances.

CADENCE

It is the number of pedal strokes you make in one minute. In other words, your speed of execution. Combined with the force you apply on the pedals it gives the power output.

TORQUE ANALYSIS

Measuring left and right torque for each pedal stroke to know maximum and minimum values as well as pedal stroke smoothness.

BALANCE

The balance function available on the DUAL version give you separate power from right and left leg. This is a gain of precision on the analysis of your performance.

Also measured: normalized power, torque effectiveness, intensity factor, training score stress,...
100 HOURS OF AUTONOMY FOR AN EXTENDED EXPERIENCE

Every detail has been thought and improved to ensure an even easier experience.

Lithium ion batteries provide a 100h battery life *
Charging your batteries has never been easier.
It is not necessary to take off your pedals, a simple magnetic connector can recharge your two pedals simultaneously to ensure unlimited performance.
ANALYZE - COMPARE - SHARE

Track your day-to-day activities, set your goals, and drive the evolution of your performance from the measured data.

The SRM PC8 allows you to display values such as power, heart rate, speed, distance, location as well as training metrics such as Training Stress Score®, Normalized® power and Intensity Factor®.
